

**OPTIFOG**<sup>®</sup> The new technology against fog

## Steaming up lenses..... Now a thing of the past

Optifog Lenses - The new technology against fog.

All spectacle wearers have at some point encountered what we commonly refer to as our 'glasses steaming up' or fogging. It doesn't matter where we are, it always happens when we move from a cold to a hot environment.

For many, this can be problematic as well as being unsightly. It's also a major inconvenience as we rely on instant vision at all times.

Well not any more with Optifog. Optifog is a revolutionary patented lens that does not fog.

Optifog will not only keep your lenses looking great but more importantly keep your vision clear!

Optifog lenses from Essilor deliver unique lens technology that gives long lasting fog free vision to all wearers.
